DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group I, the species of fixation pin represented in Fig. 10 (Species 3), with an annular structure, in combination with the species of plate represented in Fig 6 (Species B), in the reply filed on 2/28/05 is acknowledged.

Claims 3, 6-8, 10, 11, 16-20, 23, 26, 27, 29, 30, and 35-56 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to nonelected species of invention, there being no allowable generic or linking claim.

Claim Objections

Claims 1 and 15 are objected to because of the following informalities:

In claim 1, line 4, the phrase "a first retention structure the elongated bodies" is clearly missing a word between "structure" and "the." The word "on" has been assumed for examination purposes.

In claim 15, line 1, the claim appears dependent upon itself. For examination purposes, claim 15 has been assumed to properly depend from claim 13.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 4, 5, 12, and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Judet et al (U.S. Pat. No. 5,591,168. Figs. 1 and 3 of Judet et al show a femoral neck fracture system having all the limitations as recited in the above listed claims, including: a plurality of elongated bodies 3, each having a distal end with helical anchor 3b, a proximal end 3c with a “first retention structure” (threaded hole 3c) and an “annular structure” (hexagonal bore 3d); a plate 1g with a plurality of openings (1e, 1f); and a side plate 1k comprising a plurality of openings 1b for receiving femoral shaft screws.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

Art Unit: 3731

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 14 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Judet et al. It is noted that Judet et al is silent with respect to specific dimensional spacing of the openings in the side plate. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to design the side plate to have any convenient and useful hole spacing for use on a variety of sizes of femurs.

Allowable Subject Matter

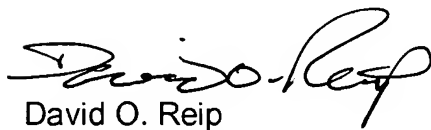

Claims 21, 22, 24, 25, 28, and 31-34 are allowed.

Claims 2 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
